MUHAMMED SINAN

Software Engineer · Full-Stack (MERN / TypeScript) · AI Integrations

Kozhikode, Kerala, India github.com/sinanptm linkedin.com/in/sinanptm sinanptm.vercel.app leetcode.com/sinantpm

SUMMARY

Software Engineer with 1.5+ years building the hardest parts of production client applications: AI integrations, complex third-party APIs such as Microsoft Business Central, and legacy-to-modern migrations. Strong in TypeScript, Node.js, React, and Next.js, with deep experience refactoring, stabilizing, and optimizing real-world codebases. Active open-source contributor with merged contributions to widely used projects.

EXPERIENCE

Software Engineer — Codecords (Craxinno Technologies) *Mar 2025 – Present*

- Specialized in building complex, high-risk features across multiple client codebases — taking on the integrations and refactors that carried the highest technical risk.
- Integrated AI capabilities (OpenAI, Gemini) into client backends, including cleaning up and stabilizing existing AI-driven codebases for production reliability.
- Built integrations with complex third-party systems, including Microsoft Business Central (ERP) and other external APIs, handling authentication, data mapping, and error recovery.
- Migrated 4–5-year-old legacy React applications to modern stacks (Next.js, TypeScript) without disrupting live functionality — modernizing architecture, dependencies, and build tooling.
- Refactored and optimized legacy projects: resolved deep logical defects, eliminated dead code, and improved backend and frontend performance.
- Developed reusable frontend modules that raised code quality and development speed across projects, and improved SEO and UI performance for client web applications.
- Worked across stacks beyond Node.js, including integrating Python-based services with JavaScript applications.

SKILLS

Languages	TypeScript, JavaScript, Python, SQL
Frontend	React, Next.js, React Native, Tailwind CSS, Shadcn UI, SEO optimization
Backend	Node.js, Express.js, Nest.js, REST APIs, WebRTC, Socket.io, Microservices, Clean Architecture
Databases	MongoDB, PostgreSQL, Redis
AI & Integrations	OpenAI, Gemini, Hugging Face, Microsoft Business Central, Stripe, OAuth 2.0, JWT
DevOps & Quality	Docker, AWS, GitHub Actions, CI/CD, Jest, Nginx, Biome

PERSONAL PROJECTS

Clean Auth Template — 50+ GitHub stars, published NPM CLI github.com/sinanptm/clean-auth-template

Production-ready full-stack authentication system (email/OTP verification, OAuth, JWT, role-based access control) with a published NPM CLI for project scaffolding, end-to-end test suite, and automated CI/CD with security audits. Next.js 15, React 19, Express 5, TypeScript, MongoDB.

AVM Ayurvedic — Hospital Management Platform — 40+ GitHub stars github.com/sinanptm/hospital-management-system

Wellness platform with WebRTC video consultations, Gemini-powered AI chat, Stripe payments, real-time notifications, and role-based access. Clean-architecture backend (Node.js, Express, MongoDB) deployed on AWS with CI/CD via GitHub Actions.

OPEN SOURCE CONTRIBUTIONS

- **Gemini CLI (Google)** — developed the copyprompt command and contributed to core command processing.
- **Strapi** — fixed CVE-2025-25298 (weak password length validation) and a bcrypt.js truncation flaw in password hashing.
- **Origin UI** — contributed 2 new UI components to the component library.
- **Impler.io** — identified and resolved 2 security vulnerabilities in the codebase.

EDUCATION

Brototype, Kozhikode — MERN Stack Development *2023 – 2024*

SNGHSS, Chelannur, Kozhikode — Higher Secondary (Science) *2021 – 2023*
